

500ADAT

Expand your studio. Expand your sound.

500ADAT is home to 8 of your favourite 500 series modules. It's also an 8in/8out ADAT expander, analogue summing mixer, and artist mixer. It expands the I/O of any ADAT-equipped audio interface.

OPIS

- 8 Channel A/D-D/A converter
 - 8-in/8-out @ 44.1kHz - 48kHz
 - 8-in/8-out @ 88.2kHz - 96kHz
 - 4-in/4-out @ 176.4 - 192kHz
- High-performance A/D-D/A conversion
 - Dynamic Range: 121dB A-weighted, AES17 method, 20Hz - 20kHz
 - Frequency Response: -1dB, 2.2Hz to >80kHz
 - THD+N: <0.00032% (-110dB) @ -4dBFS, 20Hz - 40kHz, 1kHz, A-weighted
 - Max I/O Level: +24dBu

- Master reference-quality internal clock
 - Capable of 44.1, 48, 88.2, 96, 176.4, and 192kHz operation
 - <0.5ps of jitter
 - Dedicated Word Clock Input and Output via BNC
 - External sync options using Word Clock BNC or ADAT
- Analogue summing mixer
 - 8-into-2 analogue summing mixer with +26.5dBu of headroom and balanced 1/4" jack outputs
 - C.A.S.T. link port for increasing summing mixer to 16-into-2 using Cranborne Audio 500ADAT
- Zero-latency artist mixer
 - Zero-latency analogue artist mixer with physical level/pan controls per channel and aux input blend controls
 - 2 high-power headphone outputs with independent blend and level controls
- Reference-Quality Headphone Outputs
 - THD+N: <0.0006% (-104.4dB) @ 20dBu, 1kHz, A-weighted, 300ohm load
 - Output Wattage (1kHz): 250mW x 2 @ 600 ohms, 650mW x 2 @ 220 ohms, 1.21W x 2 @ 100 ohms, 500mW x 2 @ 32 ohms
 - Frequency Response: 1dB, <1Hz to >70kHz
- High-current 8-slot 500 series rack
 - 250mA current per-slot with 2A total for all slots
 - XLR inputs, XLR line outputs, and TRS Inserts (pre-ADC) per 500 series slot
 - Module source switching options to send Analogue, USB or external C.A.S.T. signals through your favourite 500 series modules
 - Module bypass switches per-slot allowing 500ADAT to be used without 500 series modules inserted.
- C.A.S.T. Compatible
 - C.A.S.T. ports per channel for relocating analogue I/O around studio using passive or active C.A.S.T. breakout boxes via standard shielded Cat 5
- 24v, 5a external locking power supply
 - External power supply for improved analogue audio performance and heat dissipation.
- Designed and Engineered in the UK

- Each and every 500ADAT is extensively tested by a team of dedicated engineers to ensure reliability and consistency

All specifications are typical performance unless otherwise noted. All specifications are subject to change at any time. Tested with Audio Precision APx555 at 192 kHz internal sample rate and internal clock. HF response of digital measurements will vary depending on sample rate selected during recording.

N22 is a standalone 4 channel Cat 5 snake and advanced audio distribution system using C.A.S.T.

Standalone Cable Management Tool

Put simply, N22 replaces 4 balanced XLR cables with 1 shielded Cat 5e, Cat 6, and Cat 7 cable over distances of up to 100m.

Featuring our C.A.S.T. system, N22 distributes audio around studios or stages by repurposing the internal copper wires of shielded Cat 5e, Cat 6, and Cat 7 cable to transport balanced analogue audio to and from other C.A.S.T. enabled products - such as another N22.

Advanced C.A.S.T. Breakout Box

Studios already built around a Cranborne Audio interface can use N22's to transform their studio space.

Place N22 in the live room and audio connected to N22 will appear directly at the interface's inputs ready recording. At the same time, the same C.A.S.T. connection also sends a stereo monitor mix from the interface directly to N22's balanced outputs.

N22H

Reference-Grade Headphone Amplifier, Cat 5 Snake, and C.A.S.T. Breakout Box.

Deployable Headphone Amps via Cat 5

N22H is a headphone amp that can be deployed exactly where it is needed - right beside the musician.

Using our C.A.S.T. system, N22H can be connected on the end of a 100m (330ft) shielded Cat 5e, Cat 6, and Cat 7 cable and deliver a headphone mix directly to the musician during tracking.

Standalone Reference-Quality Amplification

Based on the same custom design found in the renowned 500R8 interface, N22H's headphone amplifier achieves a flat Frequency Response from 0.8Hz to above 250kHz and

ultra-low distortion (0.0009% THD+N, 100 kOhm load) allowing it to power headphones with clean, transparent power during critical listening, mixing, and mastering.
