

SCHOEPS CCM 4S

This type of microphone has a low-frequency rolloff to compensate for the low-frequency boost which occurs when close-miking.

Cena:

Kategorie: [Audio](#), [Mikrofony](#)

OPIS

- cardioid pattern
- for pickup of speech or music at close range (under 50 cm)
- considerable attenuation of low frequencies

Application

This microphone type is used primarily in voiceover and sound reinforcement applications, and wherever good speech audibility in a noisy environment is a prime requirement. It is suited for the recording of music in exceptional cases only. When it is used at a distance of ca. 10 cm flat frequency response can be obtained.
